

# Sewer Lagoon O&M, Regulations, System Upgrades and Energy Solution Training

May 28, 2020 • Pueblo West, CO

This training will focus on sewage lagoons systems operations and maintenance, issues to look out for and the regulations driving many systems to consider upgrading to mechanical treatment processes. Keeping in mind that upgrading to more complex treatment processes comes with larger utility demands, guest speakers will discuss programs for systems to consider when incorporating renewable energy into their infrastructure upgrades.

RCAC has invited diverse speakers to compliment this training including Barbara Bennett of CDPHE, who will speak on regulations that impact Lagoons. A representative from Colorado Energy will introduce the Energy Performance Contracting Program to finance infrastructure upgrades, GRIDAlternative, a nonprofit renewable energy developer focused on solar projects and workforce development for rural Colorado.

Renewable projects usually start with an Energy Audit. Sebastian Madrid will present on the CRW Energy Efficiency Program. Learn how you can sign your system up for this FREE audit.

This workshop is for wastewater operators, utility directors, board members, town managers, and finance managers.

*5 Contact Hours Available. 0.5TUs pending approval with CCWP.*

**When:** May 28, 2020 9:00am to 3:30 pm

**Where:** Colorado Rural Water Association  
176 W Palmer Lake Dr, Pueblo West, CO 81007

**Register online at:** <https://www.events.rcac.org/assnfe/ev.asp?ID=2033>
