

# Water Distribution Certification Review D1 & D2

August 20, 2019 • Lemoore, CA

Do you cringe when someone mentions the word test? Many operators get nervous about this when it comes to testing. Come learn the basics of water distribution so you can prepare to take the D1 D2 test. If you are new to water distribution and just want to learn the basics we will cover: Water Distribution System Types, Math, Rules, Water System Materials, Disinfection, Safety, Water Pressure, etc. We can put information into terms that make it a little easier to understand. In this workshop we will introduce you to the method of laying out a math problem and making it easier to put the numbers in your calculator correctly to get the right answer. And we will try to make sure that the math answers make sense when you do use a calculator to figure them out. Come review and practice with us.

The recommended audience includes water system operators, maintenance staff, managers and anyone who works on a water distribution system.

*This workshop qualifies for 6 contact hours.*

**When:** Tuesday, August 20, 2019 • 8:30 a.m.–3:00 p.m.
